

The X35 Official Firmware Release Note (R1006)

- ① Release date : September 8th, 2017
- ② The version of updated firmware : R1006
- ③ Refer to the below for the contents updated at R1006

We would like to release X35 new firmware(R1006), because there was bugs in previous release(R0990) that, if you input password of SSID(wireless router) newly, wireless network doesn't connect properly and says 'connection fail'. But, it will be connected properly in case that password is already input. And, there was problem to download previous release(R0990) via automatic network update function.

We corrected these two bugs, and like to release new version(R1006)

Thank you so much!

- ① Release date : August 30th, 2017
- ② The version of updated firmware : R0990
- ③ Refer to the below for the contents updated at R0990

A. New Functions

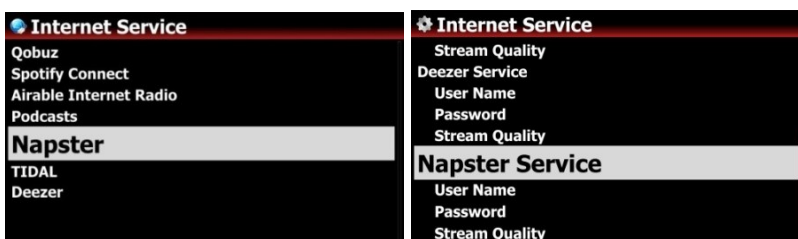

1 Supports MQA playback

We made X35 support MQA(Master Quality Authenticated) playback

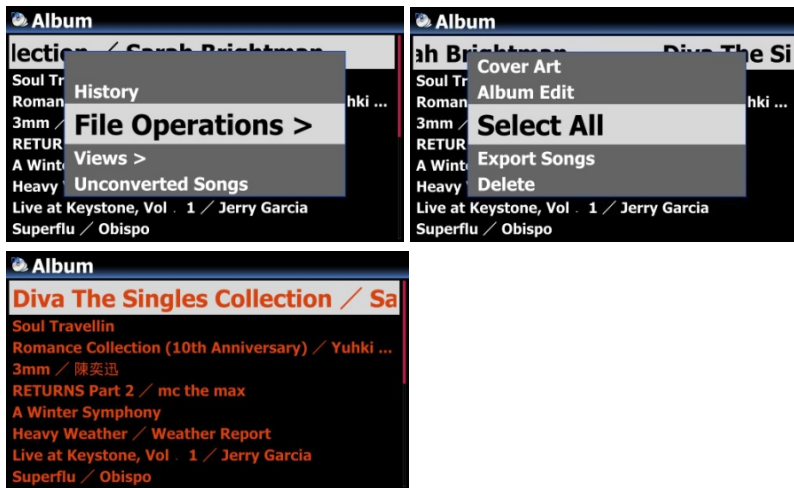

When playing MQA file, press INFO key on the Now Playing Screen to check file format

2 Added one more service, Napster to Internet Service

If you have ID for Napster, you can enjoy numerous songs at Napster with the X35 directly.

[3 Added the function to 'Select All'](#)

If you want to select all lists, open the list and press MENU/File Operation/Select All

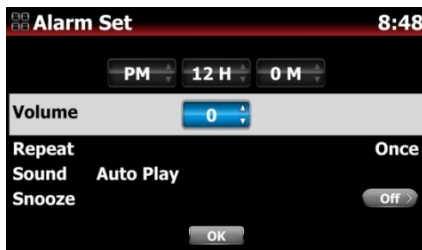

[4 Support MKA file](#)

MKA file is Matroska Audio file, which is audio container format. We made X35 support MKA file also.

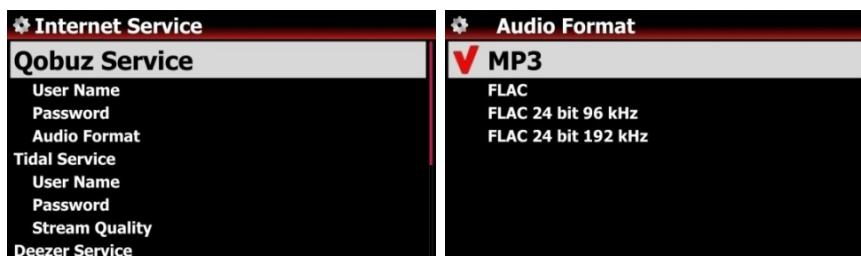

[5 Added 45 minutes option to Sleep option](#)

It used to have 5(five) Sleep options like 10 min, 20 min, 30 min, 1 hour, 2 hour and 3 hour. We added one more option, 45 min.

[6 Added the function to set Volume Level at Alarm Setting](#)

[7 Added the option at SETUP to select sample rate of FLAC file at Audio Format option for Qobuz Service](#)

[8 Updated MusicX App\(version 1.2.1\) released](#)

As the updated version(1.2.1) of NOVATRON MusicX App is available at Google Play Store and Apple App Store, please update MusicX App on your controller devices with it.

B. Improvement

- 1 Improved MusicX App Server
- 2 Cleared the bug that burning CD with hi-res audio files like 96Khz or 192Khz with 24Bit) has some problem
- 3 Made Google work again for Album cover art downloading
- 4 Improved to show Album name as well as Artist name in Qobuz in all view

Thank you very much
